

Assignment Title

Design a Dynamic Web Application like Fashion Store / E-Commerce Product using HTML, CSS, JavaScript and Bootstrap CDN

Name: Yash Mahajan

PRN: 123B1B289

DIV: D

Objectives

- To design a dynamic E-Commerce web application.
- To understand integration of HTML, CSS and JavaScript.
- To implement product listing and shopping cart functionality.
- To learn basic client-side authentication (login system).
- To create responsive UI using modern CSS and optionally Bootstrap CDN.

Outcomes

- Learned to build dynamic web applications.
- Understood DOM manipulation using JavaScript.
- Implemented real-time cart system.
- Learned multi-section navigation using JavaScript.
- Improved UI/UX design skills.

Theory Concept in Brief

A Dynamic Web Application is a website that changes content based on user interaction. Unlike static websites, dynamic websites use JavaScript to update content without reloading the page.

In an E-Commerce system, main components include:

1. Frontend Technologies

- HTML → Structure of webpage

- CSS → Styling and layout
- JavaScript → Dynamic behavior

2. Core Functionalities Implemented

- Login Authentication (Basic client side validation)
- Product Listing
- Add to Cart Feature
- Remove from Cart
- Checkout Process
- Order Confirmation

3. DOM Manipulation

JavaScript modifies webpage content dynamically using:

- getElementById()
- querySelector()
- createElement()

4. Responsive Design

Modern CSS + Grid layout is used. Bootstrap CDN can be added for responsiveness.

Dataset Used

Not Applicable

This project uses static product data defined inside JavaScript.
