

Assignment 1

Create a Static Web Page Defining All HTML Text Formatting Tags in Tabular Format

Name: Yash Mahajan

PRN: 123B1B289

DIV: D

Objectives

- To understand the structure of an HTML web page.
- To learn and implement HTML text formatting tags.
- To display formatting tags using tables.
- To develop a static web page using HTML.

Outcomes

- Learned how to create static web pages using HTML.
- Understood the usage of different HTML text formatting tags.
- Learned how to create and design tables in HTML.
- Gained knowledge of how browsers display formatted text.

Theory Concept in Brief

HTML (HyperText Markup Language) is the basic language used to create web pages. It uses tags to structure and format content on the internet.

Text formatting tags are used to change the appearance and importance of text. Some commonly used formatting tags include:

- `<b>` – Displays bold text
- `<strong>` – Shows important text
- `<i>` – Displays italic text
- `<em>` – Shows emphasized text
- `<u>` – Underlines text

- `<mark>` – Highlights text
- `<small>` – Displays smaller text
- `<sub>` – Displays subscript text
- `<sup>` – Displays superscript text
- `<del>` – Shows deleted text
- `<ins>` – Shows inserted text
- `<code>` – Displays programming code format
- `<pre>` – Displays preformatted text
- `<br>` – Inserts line break
- `<hr>` – Inserts horizontal line

Tables in HTML are created using `<table>`, `<tr>`, `<th>`, and `<td>` tags. Tables help display data in rows and columns in an organized way.

Dataset Used

Not Applicable.

This assignment is based on static HTML webpage creation and does not require any dataset.

Conclusion

This assignment helped in understanding HTML text formatting tags and their usage. We also learned how to create tables and design static web pages. This knowledge is useful for building the foundation of web development.
